

Product Technical Specification

Supplier product code	02691	
Version	0003	
Issue date	08.01.2019	
Range	Renshaw Professional	
Product title	Confectionery Ready to Roll Icing - Belgian White Chocolate	
Product description		
Renshaw Confectionery Icing has been specially formulated for its excellent taste. It is made with real chocolate to make it luxuriously delicious. It is ideal for cake covering, filling, confectionery and is sheetable and extrudable.		
Pack size:	5 x 1kg e

Product Technical Specification

Legal name
Sugar paste
Ingredients list
Sugar, Belgian White Chocolate (11%) (Sugar, Cocoa Butter, Whole Milk Powder, Skimmed Milk Powder, Emulsifier: Soya Lecithin, Natural Vanilla Flavour), Glucose Syrup, Water, Palm Oil, Humectant: Vegetable Glycerine, Emulsifier: Mono- and Di- Glycerides of Fatty Acids, Natural Flavouring, Stabiliser: Tragacanth Gum, Maize Starch, Preservative: Potassium Sorbate, Antioxidant: Tocopherol-Rich Extract.
Made in a factory that handles nut ingredients (Almonds)

Composition	Typical figures %	Countries of origin
Sugar	70 - 80	Angola, Australia, Barbados, Belize, Benin, Brazil, Burkina Faso, Colombia, Costa Rica, Dominican Republic, El Salvador, Ethiopia, Fiji, France, Guadeloupe, Guatemala, Guyana, Honduras, Ivory Coast, Jamaica, Kenya, Laos, Madagascar, Malawi, Mauritius, Mozambique, Nepal, Nicaragua, Panama, Reunion, Suriname, Swaziland, Tanzania, United Kingdom, Zambia
Belgian White Chocolate	11	Belgium
Glucose Syrup	5 - 10	UK, Netherlands
Water	1 - 5	UK
Palm Oil	1 - 5	Papua New Guinea, Solomon Islands, Malaysia, Indonesia
Humectant: Vegetable Glycerine (E422)	1 - 5	UK, Germany, Belgium, France
Emulsifier: Mono- and Di- Glycerides of Fatty Acids (E471)	<1	Malaysia, Indonesia (Manufactured in Denmark)
Natural Flavouring	<1	UK
Stabiliser: Tragacanth Gum (E413)	<1	Iran, Turkey
Maize Starch	<1	Germany, Denmark
Preservative: Potassium Sorbate (E202)	<1	China
Antioxidant: Tocopherol-Rich Extract (E306)	<0.1	Netherlands

Genetically modified materials
To the best of our knowledge, this product is not made from genetically modified material and does not use processing aids or additives which are genetically modified. A GM policy is available on request.
Irradiated materials
This product does not contain any ingredients that have been treated with ionising radiation.
Nanomaterials
This product does not contain any engineered nanomaterials.

Product Technical Specification

Shelf life: unopened

12 months from date of manufacture.

Shelf life: opened

Once opened, it is the responsibility of our customers to establish the maximum permitted time until all material should be used. This will depend on their specific environment, practices and procedures.

Microbiological testing		
At the time of manufacture		
Organism	Target	Maximum
TVC	<5000 cfu/g	5000 cfu/g
Yeasts & Moulds	<10 cfu/g	100 cfu/g
Enterobacteraceae	<10 cfu/g	10 cfu/g
Salmonella	Not detected in 25g	N/A

CLAS accredited methodology used. Test frequency based on risk assessment (JF Renshaw Ltd, in-house lab)

Chemical		
Test	Method	Standard
Moisture	Karl Fischer titration	5.4 - 6.8%

Physical		
Test	Method	Standard
Appearance	Organoleptic	Off-white sugarpaste. Free from any visible lumps or specks.
Flavour	Organoleptic	White chocolate.
Texture	Organoleptic	Smooth to slightly powdery and soft to the bite leading to a pasty, sticky mouth coating which then dissolves away.
Aroma	Organoleptic	Sweet vanilla.

Product Technical Specification

Brief process description

Milled sugar is combined with fat, glucose, gum and flavouring to give a ready to roll icing which is perfect for decorating cakes and/or modelling. The paste is packed, checkweighed and metal detected.

Overview of HACCP - available upon request

Metal detection

Checked at start up, every hour and end of each packing run: 2.5mm Ferrous, 4.0mm Non-Ferrous, 5.0mm Stainless Steel test pieces

Sieves

Not appropriate for this product type.

Packaging

Sealed in clear 12µm Alox PET/ 38µm LDPE film and packed into a fibreboard carton. Packed 5 per corrugated fibreboard shelf ready outer case. Outer case label applied.
35 cases per layer, 5 layers high, 175 cases per pallet. All pallets shrink/stretch wrapped.

Recycling information

Film - Plastic not currently recycled
Carton - Card widely recycled
Outer case - Card widely recycled

Production date code

5 digit code. 1st & 2nd = year; 3-5 = day of the year e.g 26/08/2016 = 16238

In the event of any issues, please quote information as per example below:

Product Technical Specification

Health & safety data		
Physical Appearance	Off-white sugarpaste.	
Ingredients	See ingredients section of the specification.	
Intended use	For bakery use.	
Storage & Handling	See specification.	
Occupational exposure hazards	None, under normal conditions of use at room temperature. Avoid eye contact.	
Fire/explosion hazard	The product will burn if ignited, but under normal conditions of use, will present no fire risk.	
First Aid	Eyes:	Flush with plenty of water. Seek medical advice if needed.
	Skin:	Wash with soap and water.
	Ingestion:	No hazard under normal conditions of use.
	Inhalation:	No hazard under normal conditions of use.
Spillage	Wash area with detergent and water to avoid slip hazard.	
Disposal of waste	Normal waste disposal in accordance with local and national laws.	
Other hazards	None known.	
Protective clothing	Normal for food handling.	

Product Technical Specification

Ready to Roll Icing handling and usage instructions

Ready to roll icing is typically made from icing sugar, glucose syrup, vegetable oil, stabilisers, glycerine, emulsifiers, preservative and flavouring; colours may also be added. (Refer to the ingredients list).

Possible applications:

Sheeting and covering, moulding, modelling and cutting shapes.

Recommended storage

Ready to roll icing should be stored in dry conditions between 5°C and 18°C, away from heat sources and odorous materials. The shelf life of icing is recommended provided the packaging remains unopened and product is stored correctly. It is the responsibility of our customers to carefully consider and establish that the icing lasts for the required shelf life of their end products.

Recommended handling and processing:

a) Opening

Once opened, ready to roll icing should not be exposed to air for prolonged periods as product will harden and also potentially become prone to microbiological contamination.

Once opened, it is the responsibility of our customers to establish the maximum permitted time until all material should be used. This will depend on their specific environment, practices and procedures.

b) Unused material

Any unused material should immediately be wrapped in close fitting polythene, expelling as much air as possible; then stored in an airtight container for later use.

It is the responsibility of our customers to carefully consider and establish that any re-wrapped material is fit for purpose when using it.

c) Handling

For best results before using the icing, ensure it's tempered to room temperature.

Using the heels of both hands, gently knead the paste to warm it and to improve elasticity and pliability.

d) Rolling out

Roll out the ready to roll icing on a non-stick surface using a rolling pin and icing sugar to dust the work surface, avoid using an excess of icing sugar as it will cause icing to dry out and crack.

Never roll out cold icing, always ensure you knead the product before rolling out.

Avoid the use of flour to prevent sticking or aid sheeting, as this will potentially introduce both a microbiological and allergen issue.

Product Technical Specification

e) Placing sugarpaste on cake

Gently lift the rolled out layer of Ready to roll icing with a rolling pin or with both hands, taking care not to stretch or tear it, position carefully on cake.

Smooth and shape the icing on cake top and sides until it feels silky to the touch, immediately trim any excess icing flush with the base of the cake using a sharp knife.

f) Adherence on cakes

Alcohol, clear spirit or cooled boiled water is recommended to be applied to marzipan layer, to aid adherence of icing layer onto the first marzipan layer.

If covering onto a sponge cake, a thin coating of butter cream is recommended to be applied to it to aid adherence of icing layer onto the cake.

g) Adherence of models

Alcohol, clear spirit or cooled boiled water is recommended to aid the adherence of any models to the icing layer.

Rework

Ensure rework is not overexposed to air or moisture causing drying out or stickiness. Where material is reworked this should not be contaminated with cake crumb or jam.

Rework material should be kept in a cool dry place, wrapped well and used within a short period of time.

It is the responsibility of our customers to carefully consider and establish that any re-work material is fit for purpose and that the maximum permitted time until all material should be used when using it, depending on their specific environment, practices and procedures.

Water activity

The imbalance of water activity between the various components of a cake will potentially cause moisture migration to the icing layer. This should be considered during the development of any products.

Things to be aware of:

Ready to roll icing may dry out or crack if the icing has been over exposed to air during or prior to handling, too much dusting sugar will also cause drying out and cracking of the icing.

Ready to roll icing may become sticky if it has been exposed to moisture during or prior to handling. This may be caused by an imbalance of water activity between various cake layers.
